

## **Environmental Policy**

### **Statement**

Diamond Waste Ltd is committed to industry leading impact minimalisation with a view to improving the effects on the environment.

### **The key points of our strategy**

#### **Detailed commitments**

- To reuse and recycle as many materials, wherever it makes commercial sense to do so. We aim to do this by developing partnerships with other organisations who share the same focus as we do and who can reuse or resell the materials collected by us. Examples of companies include MRF's, charities and social enterprises to name but a few.
- To review the options for each load to ensure that we select the most economically beneficial and cost effective method. We aim to do this by promoting our environmental policy to all levels of the business and by incentivising our employees so they are encouraged to reuse or recycle as much as possible (wherever commercially viable).
- To be economically accountable for the damage our vehicles have on the environment and to take necessary action to reduce our carbon footprint. We aim to do this by partnering with companies that offer us a way to curb the amount of tonnes of CO2 we produce as an organisation and by implementing a route optimisation system that enables us to reduce the mileage of each van by efficiently planning our route from job to job in advance.

#### **General commitments**

- To reduce the volume of paper used in our procedures. We promote paperless trading and communication with the people and companies with whom we deal.
- To consider the environment in any business decision we make.
- To be at the forefront of best practice as a waste carrier.
- To be constantly monitoring the company's impact on the environment, through the activities we carry out.
- To be constantly developing objectives and targets for environmental goals for the organisation
- To be continuously monitor and implement plans to meet our ongoing objectives and targets
